ChariGo · Group demo guide

A live walkthrough of the whole app in about 9 minutes, four presenters.

The plan

Time	Presenter	Part	Name	Browser
0:00 – 1:30	**1**	Welcome, the three user types, phone vs PC		Guest + phone
1:30 – 4:30	**2**	Charity Goer: browse, donate, receipt, history		A · Goer
4:30 – 7:30	**3**	Volunteering, then the Organization side		A, then B
7:30 – 9:00	**4**	Administrator, quick tech facts, close		C · Admin

The idea: follow one person, **Maria**, through the app. She donates and volunteers, the organization sees it and accepts her, and the administrator keeps it trustworthy. Just click through it live and say one simple thing per screen.

Quick setup

Role	Email	Password	Browser
Charity Goer (Maria)	goer@example.com	ChariGo123!	A
Organization (Angat Buhay)	organization@example.com	ChariGo123!	B
Administrator	admin@example.com	ChariGo123!	C

Checklist (before you start)

☐	Open the live site **30 minutes before** (free hosting sleeps; the first load can take a minute). Don't redeploy in the last hour: it resets the data.
☐	Use **three different browsers** on the projector laptop (A = Goer, B = Organization, C = Admin) and log each in with the demo buttons on the log-in page. Start on: A Home · B Profile · C Dashboard.
☐	Presenter 1: phone open on the live site. Zoom the browsers to about 125% so the back row can read.
☐	Paste-ready volunteer message: *I would like to help with cooking and packing meals. I can join on weekends.*
☐	Backup if the internet fails: run **python app.py** and use http://127.0.0.1:5000.

Good to know

- Say **what** you are about to click, then click. Slow is better than fast.
- Everyone knows the **first click of the next person**, so hand-offs are instant.
- Running long? Skip: Explore filters (P2), Create form (P3), tech line (P4).
- Rehearsed already? Reset first: redeploy online, or locally **flask --app app reset-db**.

PRESENTER 1

Welcome & the big picture

1½ min · 0:00 – 1:30
Browser: **Guest window + phone**
No login needed

#	DO (live on screen)	SAY (short and simple)
1	Show the **Welcome** page on the projector.	*"We are group ___ and this is **ChariGo**: one app to give to verified charities and to volunteer."*
2	Click **Sign up** to show the role choice, then use the back arrow.	*"There are three kinds of users: Charity Goers, Organizations, and an Administrator who verifies charities."*
3	Hold up the phone on the live **Home** page; then make the laptop window narrower and wider.	*"We built it from our Figma design. On a phone the menu is at the bottom, on a PC it moves to the top. Same app."*
4	Click **Log in** and hand over to Presenter 2.	*"Let's follow **Maria**, a charity goer."*

PRESENTER 2

Charity Goer · browse, donate, history

3 min · 1:30 – 4:30
Browser: **A (Goer)**
goer@example.com · Maria

#	DO (live on screen)	SAY (short and simple)
1	On the log-in page click the **Charity Goer** demo button, then **Log In**.	*"Demo accounts have one-tap log-in."*
2	**Home:** point at search, **My impact**, categories and the featured foundation.	*"Home gives search, Maria's impact so far, categories and featured charities."*
3	Click **Explore**, type **children** + Enter. Open **Filters** and tick **Volunteers needed**. Open **Bawat Batang Pinoy Malusog**.	*"Search and filters update instantly. Each fundraiser shows its progress and what the money helps with."*
4	Click **Donate**. Pick **₱250**, keep GCash, click **Continue to review**, then **Confirm Donation**.	*"Payments are simulated, so no real money. There is a review step so nothing is final by accident."*
5	On the receipt point at the reference number, then click **View Donation History**.	*"Maria gets a receipt, saved forever."*
6	**History:** point at **Total Donated**. Click **Search and filter**, type **iwas**. Click **Download CSV**.	*"The history can be searched, filtered and downloaded. Totals come from the real donations."*
7	Leave A on the fundraiser page (**Bawat Batang Pinoy Malusog**) and hand over.	*"Maria also wants to give her time."*

Note

- Total Donated reads **₱1,750** after the ₱250 (after rehearsals it will be higher: just say "total so far").

PRESENTER 3

Volunteering & the Organization

3 min · 4:30 – 7:30
Browser: **A, then B**
Maria, then organization@example.com

#	DO (live on screen)	SAY (short and simple)
1	**A:** on the fundraiser page click **Volunteer**. Paste the message, click **Review Application**, then **Confirm Application**.	*"Maria applies to volunteer. Same simple pattern: fill in, review, confirm."*
2	Click **View Volunteer History**. Point at the new **Pending** badge.	*"She can follow every application and its status here."*
3	**Switch to B (Organization)**. On **Profile** click **Donations Received**.	*"Now we are the charity. Maria's ₱250 is already here."*
4	Click the **Home** tab → **Manage fundraiser** on Bawat Batang Pinoy Malusog → **Check Volunteers** → **View Applicant** (Maria).	*"The organization sees who wants to help and can read their profile."*
5	Click **Accept**, then **Confirm decision**. (Optional: click the **Create** tab and show the form.)	*"Accepting needs a confirmation. Verified organizations can also create fundraisers here."*
6	**Back to A:** open **Volunteer History** and refresh.	*"And Maria now sees **Accepted**."*

Note
- If Maria had already applied in a rehearsal, accept **Ana** instead, or sign up a new goer live (about 20 seconds).

PRESENTER 4

Administrator & close

1½ min · 7:30 – 9:00
Browser: **C (Admin)**
admin@example.com

#	DO (live on screen)	SAY (short and simple)
1	**Dashboard:** point at the numbers, especially **pending verification**.	*"The administrator sees the whole system at a glance."*
2	Click **Organizations** → **Community Care Team** → **Review Organization** → **Approve Organization** → **Confirm approve**.	*"New charities must be approved before they can create fundraisers. This is how users can trust the app."*
3	Click **Records** and point at the newest rows.	*"Important actions are logged: the donation, the application, the approval."*
4	Face the audience.	*"It is built with Flask and SQLite, runs online and locally, and has automated tests. Payments are simulated for now. **Thank you!**"*

Note
- Never deactivate the demo accounts during the demo. Presenter 1 takes questions after.

Quick questions and answers

One sentence each is enough. Presenter 1 picks who answers.

Question	Answer	Who
Is real money used?	No. Payments are simulated; a real provider such as GCash or Maya is the next step.	2
How do you know a charity is real?	Organizations register with official details and an administrator approves them. Unapproved ones cannot create fundraisers or appear publicly.	4
How does the history work?	Every donation and application is saved as a record. History, receipts and totals all come from those records.	2
How does it work on phone and PC?	One responsive layout: bottom menu on phones, top menu and grids on larger screens.	1
Is it secure?	Passwords are hashed, forms have tokens, and the server checks who may open each page.	4
What would you add next?	Real payments, email notifications, volunteer certificates and Filipino-language support.	Anyone

If something goes wrong

Problem	Quick fix
The live site is slow or blank	It was asleep: wait up to a minute while Presenter 1 keeps talking, or switch to the local copy.
No internet	Phone hotspot, or run **python app.py** and use http://127.0.0.1:5000.
“Demo account is missing or was changed”	Locally run **flask --app app restore-demo**; online, redeploy. Use another demo account meanwhile.
Numbers differ from the script	Rehearsals added data. Say “total so far”.
You were logged out	Click your role's demo button on the log-in page.
Running over time	Skip the optional steps listed on page 1.
